SAMPLE REPORT / FICTIONAL DATA

Student Direction Profile

A demonstration of how assessment themes may be organised for a guided conversation. This is not a real student report, diagnosis, prediction, or validated assessment result.

Important
All names, scores and recommendations in this document are fictional. Actual G3B reports depend on the authorized instrument used and professional interpretation.

Profile overview

Sample learner	Aarav Mehta (fictional)
Current stage	Exploring subject choices
Purpose	Discuss strengths, interests and areas for further exploration
Interpretation	Guided review with a counsellor

Illustrative aptitude pattern

The values below demonstrate presentation only. They are not norms, percentiles, or results from a real instrument.

Area	Illustrative indicator	Conversation prompt
Verbal reasoning	Developing strength	Which reading and explanation tasks feel most engaging?
Numerical reasoning	Balanced	What changes when a problem is presented visually?
Logical reasoning	Emerging strength	Which puzzles or systems hold attention longest?
Spatial reasoning	Explore further	Would a supervised practical task add useful evidence?

Themes to discuss, not labels to accept

Curiosity through projects	The fictional learner reports stronger engagement when ideas lead to a visible output or experiment.
Collaborative explanation	Discussing a concept with peers may help reveal understanding and unanswered questions.
Structured independence	Clear milestones appear helpful while leaving room to choose the approach.
Reflection before decisions	A short comparison framework may improve confidence when several options seem attractive.

Possible exploration areas

These examples are prompts for research, not recommendations or predictions.

Exploration area	Why it may be worth investigating
Applied sciences	Connects analytical reasoning with practical investigation.
Economics and social research	Combines evidence, written interpretation and real-world questions.
Design and technology	Could test spatial thinking, iteration and project-based learning.

Suggested next steps

01 Discuss the profile alongside school performance, interests and practical constraints.

02 Choose two exploration areas and complete one small project or introductory activity in each.

03 Compare subject prerequisites using official school or university information.

04 Revisit the plan after gaining new evidence; do not let one report make the decision.

Questions for a counselling conversation

What options is the learner currently considering? What evidence supports or challenges each option? Which constraints need to be planned around? What small next action would produce useful new information?
